

The Fulham Benches

Fulham bench with standard arms
(1.8m bench shown)

Fulham bench with scrolled arms
(1.5m bench shown)

Hand carving of inscriptions

General

The above benches are manufactured using top quality hardwood (IROKO) that has been grown in West Africa and is purchased from the importer who ensures that the timber is only sourced from legally felled and responsibly managed forests. The timber has an interlinked grain and is very strong and stable – it has a very high natural durability against rot and insect attack.

All benches are made in the UK by an experienced manufacturer – all benches are made to order – there is usually a waiting time of 10 -16 weeks

In service the weathering process will lead to cracks appearing, particularly in the end grain – this is normal and in no way affects the its strength or durability.

Application of the water based treatment that we recommend will reduce this effect, make the bench easier to keep clean and ultimately increase the life expectancy of the bench.

Annual cleaning and reapplication will be required.

The benches are available in 2 standard lengths and 2 different arm/front leg designs.

- | | | |
|----------|---|-----------------------------------|
| Option 1 | - | 1,5m bench with standard arms |
| Option 2 | - | 1,5m bench with scrolled arms/leg |
| Option 3 | - | 1,8m bench with standard arms |
| Option 4 | - | 1,8m bench with scrolled arms/leg |

Inscriptions

All carving is carried out using traditional hand tools by our own experienced staff. The 25mm script is in upper case roman style.

The high back of the bench permits 2 lines of script.

Technical details.

All jointing is by traditional mortice and tenons, weatherproof resin adhesive is used throughout and all structural joints are pegged.

The 10 screws used to secure each seat slat are of high quality stainless steel – they are housed in counter bores and concealed with glued in pellets.

Braces are glued and screwed to front and rear legs to provide additional strength and compete the bench aesthetically. These screws are again stainless steel as are the 12 off 6mm screws used to secure the 3 off intermediate seat supports.

The legs and arms are machined from 75mm thick timbers, the 3 main horizontal rails are from 50mm, the seat and back slats from 25mm and the 3 seat supports are again from 50mm stock

Guarantee

All benches are guaranteed against faulty workmanship or materials for 12 months.

Cracking of the end grain does not constitute faulty material - this happens to all timber when left outside.

No guarantee given or implied regarding the treatment.

We reserve the right to amend prices without notice.
